

Suite Engine Channel Sales Manager Release Notes

Product: Channel Sales Manager for Amazon

Release: 2.0

Version: 2.0.2021102919.35510

Release Date: 10/29/2021

Please install this release in your Business Central sandbox environment for testing. It is Suite Engine's recommendation that you test not only the areas specifically addressed within this release but all of your business processes, so that you may confirm that changes introduced in this release have not created issues in other parts of your application. These release notes should be fully reviewed as part of your testing process, as they may include information on new setup and configuration requirements. separate

If you encounter issues in your testing, please contact your Suite Engine partner or file a support ticket at <https://suiteengine.com/support>.

Once you have completed testing in your sandbox, you can proceed to installing this release in your live environment. Suite Engine recommends that users be logged out of Business Central prior to installation of the release; if this is not possible, please advise your users that it may be necessary to refresh or log out/log in to Business Central in order to continue working with the application.

This release is issued under the assumption that you have kept your existing Suite Engine applications current. Suite Engine cannot be held responsible for any issues that arise out of installing this release into an out-of-date environment.

This release may introduce new table objects or modifications to existing ones. If you are maintaining configuration packages for the purpose of moving data to and from database environments, you are advised to take note of any table changes (for a complete list of release objects, see [here](#)) and make any adjustments to these packages as needed.

Release Overview

Upgrade Instructions

If you are upgrading your existing version of CSM for Amazon with this release, you must make the following changes in order to ensure that your solution continues to operate as desired:

- Amazon-specific codeunit 70338338 was introduced in an earlier version of CSM for Amazon as a replacement for CSM Core codeunit 70338209 to facilitate sales order creation. The reason for an Amazon-specific codeunit was to support Amazon's tax collection methodology. To facilitate future support for Amazon's new SP-API functionality, a decision has been made to revert this codeunit back to the original Core object.

Please review the assigned value in the **SO build Codeunit** field on the **Order Management** FastTab for each Amazon sales channel in your Business Central environment.

- If this value is 70338209, you are using the original codeunit. No further action is needed.
- If this value is 70338338, you are using the newer codeunit that has now been marked for future removal.

- If you have not made any customizations to this codeunit, you should replace this codeunit with codeunit 70338209.
- If you have made customizations to this codeunit, please contact your Business Central partner.

Please note that codeunit 70338338 will no longer receive updates from Suite Engine. This codeunit will be removed from CSM for Amazon in a future release approximately 12 months from the date of these release notes. Suite Engine will provide notification of this removal no less than 30 days prior to this future release. At that point, your CSM for Amazon solution will not work without an update to the supported codeunit.

Features and Functionality

- Amazon-specific accommodations have been made to support recent changes to Suite Engine's subscription management module.
- The *CSM Administrator* Role Center now includes a link to product release notes.
- Sales order creation activities have been reverted to use a CSM Core codeunit, rather than an Amazon-specific codeunit. This change is made to facilitate future support for Amazon's new SP-API functionality. See the [upgrade instructions](#) for more details.
- New integration events have been added to accommodate additional carton creation scenarios.
- Shipment cartons have been enhanced to support contents with expiration dates.
- The **Get Inbound Shipment Status** action that previously had to be run manually from the **CSM FBA Shipment** page has been added to CSM for Amazon's automation routines. This action will now be automatically run for all FBA inbound status records every time the automation process is executed.
- A new **Copy Plan** action has been added to FBA shipping plans. Executing this action from an existing shipping plan record will instruct CSM to create a new shipping plan whose values have been copied from the original record.
- The existing **Void Transport Request** action on FBA inbound shipments has been enhanced to automatically clear the **Transport Estimate Amount**, **Transport Confirm Void By**, and **Package Labels Are Ready** fields as part of a voiding action.
- Functionality has been added that allows CSM for Amazon to calculate financial fees that are incurred as part of a financial event group. These fees are entered into a dedicated posting worksheet, where they can be reviewed and then posted by a user. See the [in-depth feature description](#) for more details.

Corrections

- Default channel order archiving settings on the **CSM Setup** page were not being assigned to new Amazon channels that were created via the setup wizard. This has been corrected.
- The Load Matrix and Automation procedures in the Amazon API utility codeunit were missing variable elements. This has been corrected.
- Running process settlement reports multiple times would result in the creation of duplicate financial event group entries. This has been corrected.
- Several FastTab and ribbon captions on the **CSM Amazon Financial Event Groups** and **CSM FBA Shipment** pages contained errors. This has been corrected.

Miscellaneous

- Documentation for CSM for Amazon's FBA Inventory Management module is now available. This documentation can be accessed [here](#).
- G/L account and transfer route updates were made to the CSM for Amazon demo data load.

In-Depth Features

Creating a G/L Journal Entry for Your Amazon Fees

- Search for CSM Amazon Financial Management Setup
 - Set your Journal Template & Batch. We suggest using journal code 'GENERAL' and create a new batch for this activity, separated from other working batches used for other purposes.
- Go to the Fin. Event Group card you want to post.
 - On the ribbon of the card, click "Fee Posting Worksheet". That opens the worksheet/ journal with the suggested entries where can be seen and edited if necessary.
 - Once verified, click on "Post Worksheet". You will never see anything in the Journal batches, it happens automatically in the background when you post the worksheet.
- Go to the 'General Ledger Entries,' or GL Accounts involved and review your posted transactions.

Release Objects

The following objects have been created, modified, or removed as part of this release:

Object Type	Object ID	Object Name	Action
Table	70338327	CSM Amazon Fin Event Group	Modified
Table	70338335	CSM FBA Shipment Prep	Modified
Table	70338339	CSM Amazon Fin Trans Fee	Created
