

Suite Engine Channel Sales Manager Release Notes

Product: Channel Sales Manager for Shopify

Release: 4.3

Version: 4.3.2023021721.71646

Release Date: 02/17/2023

Minimum Business Central Version Compatibility: 20.0

Please install this release in your Business Central sandbox environment for testing. It is Suite Engine's recommendation that you test not only the areas specifically addressed within this release but all of your business processes, so that you may confirm that changes introduced in this release have not created issues in other parts of your application. These release notes should be fully reviewed as part of your testing process, as they may include information on new setup and configuration requirements.

If you encounter issues in your testing, please contact your Suite Engine partner or file a support ticket at <https://suiteengine.com/support>.

Once you have completed testing in your sandbox, you can proceed to installing this release in your live environment. Suite Engine recommends that users be logged out of Business Central prior to installation of the release; if this is not possible, please advise your users that it may be necessary to refresh or log out/log in to Business Central in order to continue working with the application.

This release is issued under the assumption that you have kept your existing Suite Engine applications current. Suite Engine cannot be held responsible for any issues that arise out of installing this release into an out-of-date environment.

This release is compatible with the Business Central version listed above as the **Minimum Business Central Version Compatibility** and all subsequent Business Central versions; if you are deploying this release in a Business Central environment that has an earlier version than this value, functionality may not work as intended.

This release may introduce new table objects or modifications to existing ones. If you are maintaining configuration packages for the purpose of moving data to and from database environments, you are advised to take note of any table changes (for a complete list of release objects, see [here](#)) and make any adjustments to these packages as needed.

Release Overview

Upgrade Instructions

This release includes the necessary changes to support Shopify's 2023-01 APIs. Prior to this release, CSM supported Shopify's 2021-04 APIs. These older APIs will no longer be supported by Shopify as of April 1, 2023. On that date CSM for Shopify **will fail to work** unless it is updated to the new APIs.

After installing this release, please perform the following steps:

Validate New API Functions

Two new API functions are automatically added when this release is installed. If you wish to validate/review them:

1. Choose the  icon, enter **CSM API Sets**, and then choose the related link.
2. On the **CSM API Sets** page, select the Shopify API set, then choose the **API Functions** action in the ribbon.
3. On the **CSM API Functions** page, validate the existence of two new API functions:
 - CREATEFULFILLMENT
 - GETFULFILLMENTORDERS

Update API Endpoint URL

You must update the API endpoint URL that is used in your Shopify API calls to use the new APIs. Depending on your version of CSM for Shopify, this can be found in one of two places:

In older versions of CSM for Shopify, this information is stored against the Shopify API set:

1. Choose the  icon, enter **CSM API Sets**, and then choose the related link.
2. On the **CSM API Sets** page, select the Shopify API set. The API endpoint URL can be found in the **Host** field.

In newer versions of CSM for Shopify, this information is stored against the Shopify API credentials:

1. Choose the  icon, enter **API Credentials**, and then choose the related link.
2. On the **API Credentials** page, select the Shopify API set credentials, then select the **Manage** ribbon and choose the **Edit** action.
3. On the **API Credentials** card, the API endpoint URL can be found in the **API Endpoint URL** field.

Regardless of the URL’s location, you must update the final segment to 2023-01. See the highlighted portion in the below screenshot:

After this change is made, CSM for Shopify will communicate to Shopify using Shopify’s updated APIs.

General Notes

- The above upgrade instructions apply to out-of-the-box installations of Business Central and CSM for Shopify and do not account for any customizations that could be in conflict with these API changes.
- Installation of this new version will cause an immediate change in the behavior of CSM for Shopify, meaning that any breaking changes will be instantaneous.
- For both of the above reasons, be certain to first install and test this release in your Business Central sandbox/test environment. Deploying this release directly into your production environment is strongly discouraged.
- Communicate any issues you encounter in testing to Suite Engine or your Suite Engine partner as soon as possible.
- The new API updates will apply to any open Shopify orders that were already present in your Business Central environment prior to deployment of this new release. There is nothing you need to do regarding these “legacy” orders.

Features and Functionality

- Support for Shopify's 2023-01 APIs have been added to CSM for Shopify. Please see the [upgrade instructions](#) for more details on how to update CSM to use these new APIs.

Corrections

- The Shopify return order ID was not being properly assigned to sales credit memos that were generated for Shopify orders. This has been corrected.

Miscellaneous

- Deprecated Shopify fields have been removed from CSM for Shopify's default demo data load.

Release Objects

The following objects have been created, modified, or removed as part of this release:

Object Type	Object ID	Object Name	Action
Codeunit	70338375	CSM Shopify Utility Functions	Modified
Codeunit	70338378	CSM Stripe Integration Shopify	Modified
Codeunit	70338379	CSM Shopify Data Load	Modified
Codeunit	70338380	CSM Shopify Upgrade	Modified
Codeunit	70338382	CSMShopify Install	Created

Release Extensions

The following extensions have been created, modified, or removed as part of this release:

Object Type	Object ID	Object Name	Action	Extends
PageExtension	70338377	CSM Order Shopify	Modified	CSM Order
EnumerationExtension	70338377	CSMShopify Order Document Type	Created	CSM Order Document Type

Integration Events

The following integration events have been added as part of this release:

Object Type	Object ID	Object Name	Integration Events
Codeunit	70338375	CSM Shopify Utility Functions	<ul style="list-style-type: none">OnBeforeFindSalesChannelOrdersForFulfillmentOrdersOnBeforeGetFulfillmentOrderOnAfterGetFulfillmentOrder
