

Suite Engine Channel Sales Manager Release Notes

Product: Channel Sales Manager for Shopify

Release: 4.6

Version: 4.6.2023101323.102134

Release Date: 10/16/2023

Minimum Business Central Version Compatibility: 20.0

Please install this release in your Business Central sandbox environment for testing. It is Suite Engine's recommendation that you test not only the areas specifically addressed within this release but all of your business processes, so that you may confirm that changes introduced in this release have not created issues in other parts of your application. These release notes should be fully reviewed as part of your testing process, as they may include information on new setup and configuration requirements.

If you encounter issues in your testing, please contact your Suite Engine partner or file a support ticket at <https://suiteengine.com/support>.

Once you have completed testing in your sandbox, you can proceed to installing this release in your live environment. Suite Engine recommends that users be logged out of Business Central prior to installation of the release; if this is not possible, please advise your users that it may be necessary to refresh or log out/log in to Business Central in order to continue working with the application.

This release is issued under the assumption that you have kept your existing Suite Engine applications current. Suite Engine cannot be held responsible for any issues that arise out of installing this release into an out-of-date environment.

This release is compatible with the Business Central version listed above as the **Minimum Business Central Version Compatibility** and all subsequent Business Central versions; if you are deploying this release in a Business Central environment that has an earlier version than this value, functionality may not work as intended.

This release may introduce new table objects or modifications to existing ones. If you are maintaining configuration packages for the purpose of moving data to and from database environments, you are advised to take note of any table changes (for a complete list of release objects, see [here](#)) and make any adjustments to these packages as needed.

Release Overview

Features and Functionality

- The **Enable New Attribute Design** field is now automatically set to true for any Shopify channel that is created via the setup wizard.
- It is now possible to define a product status for a CSM listing. When the CSM listing is sent to an external Shopify channel, this setting will be used to determine the status of the product in Shopify. In this way, you can control the manner in which a product is made available for sale on your Shopify channel when it is sent from Business Central.
- Functionality has been added to retrieve a URL for a product in Shopify and present it on the corresponding CSM listing in Business Central. When a CSM listing is sent to Shopify and a new product is created there, CSM will instruct Shopify to generate a URL, then retrieve this information back into Business Central. For active CSM

Suite Engine, LLC

2405 Satellite Blvd Ste 225, Duluth GA 30096

888-695-5010 | suiteengine.com

listings, CSM will retrieve the URL of the product from the Shopify storefront. For draft and disabled CSM listings, CSM will retrieve a “preview URL” that presents the product as it will appear when it is published on your storefront.

Corrections

- The last execution timestamp for API functions was not being properly updated upon execution. This has been corrected.

Miscellaneous

- CSM for Shopify has been compiled against Microsoft Dynamics 365 Business Central 2023 Wave 2 (version 23) for compatibility issues. No issues were detected and no changes to the extension were necessary.
- A recent CSM Core release moved a number of CSM order fields from the Shopify extension to the Core extension. Accordingly, these fields have been marked as obsolete in CSM for Shopify.

Release Objects

The following objects have been created, modified, or removed as part of this release:
